

Instructions **Rebarr Protective Covers**

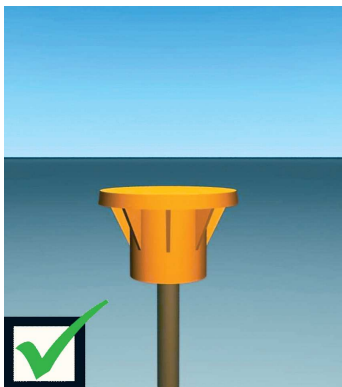

Place the cover with a turning movement.

The cover cannot be placed on the bar with a hammer.

The cover can only be used with an undamaged interior.

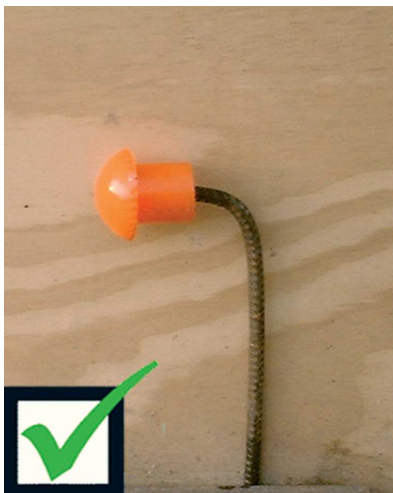

Place the cover straight on the rebar.

Do not place the cover tilted on the rebar.

Do not use covers with a damaged interior.

The mushroom cover D10 may only be used for horizontal bump protection.

The mushroom cover D10 may not be used for vertical protection

TÜV, Aboma+Keboma and TNO judge positive:

TÜV, Aboma+Keboma and TNO feel that the Suprotek protective covers indeed increase safety in the working area. The protective covers were subjected to a falltest in which a falling object of 105 kg was used from a height of 4 meters. The result: the object remained intact and the protective cover absorbed all energy that was released during the fall, partly because a steel plate is integrated into the cover. This result proves that the chance of injuries is considerably decreased. Eventually, this will mean less sick leave
